

Pre-Engineered Steel Buildings

Going Green:

These days, everyone is looking to be a little greener. Steel is a green choice, not only because prefab steel frame buildings are thermal and energy efficient, but also because steel is North America's number one most recycled product. Steel scrap is an essential ingredient in making new steel, and while the average 2,000 square foot home consumes 50 trees, a steel-framed home uses the equivalent of six scrapped cars. Rest assured, when you build with steel, you're building green.

Single Source Assurance:

Gone are the days of finger pointing and running in circles to have a problem fixed. When you choose Timberline Rack steel-frame buildings, all of your supplies and maintenance come from one source, meaning less hassle for you. If there's a problem with your steel building, one phone call is all it takes.

Easily Expandable:

Looking to expand on your already existing steel building? Not a problem. Steel buildings are amongst the easiest of structures to modify. No matter the shape or size (or how old your building may be), removing end walls, adding additional panels and building new framework are easy tasks, with short construction times and minimal costs.

Peace of Mind:

Class C fire rating -- Same as all masonry buildings. Our buildings are suitable in any zoning district and can be specified to meet or exceed the strictest earthquake, or any commercial codes in America. Extensive assembly documents and plans are provided. All plans are engineer stamped and ready to be submitted to the building department. Unlike wood, steel is impervious to rotting, molding or shrinking, and is not susceptible to ants or termites. Because it's a manufactured product, steel studs have no knots, splits or other defects that can come with wooden studs. Furthermore, steel structures are effective against fires, earthquakes, hurricanes and other natural disasters.

Steel Buildings for:

- Warehousing
- Manufacturing
- Agricultural
- Aircraft Hangars

Bulk Storage Sheds

Umbrella Canopies

Covered Storage Areas

Drive Thru Buildings
